

The Instant Fly Fighter

FLY LESS

Cavalor FlyLess is a highly effective insect repellent spray to protect horse and rider against horseflies, flies, mosquitoes, ticks and other insects. The pleasant fragrance will make sure you can enjoy your summer ride to the fullest.

KEY INGREDIENT

Cavalor FlyLess contains **icaridin (20.6 %)**, a repellent molecule registered for both human and horse.

Icaridin forms a scented blanket on the skin, disrupting the mechanism that attracts insects to human and animal skin.

The **non-sticky, non-greasy** formula is **gentle on the skin** and **will not harm or stain your clothing or gear**.

Avoiding insects will also **avoid stress, itching, allergies and diseases from insect bites**. Because icaridin does not kill the insect, the insect will not develop resistance to Cavalor FlyLess.

Studies have shown that formulations with 20 % icaridin protect humans for up to 10 hours and horses for **up to 24 hours**.

CAVALOR FLYLESS

DESCRIPTION

Transparent liquid

DIRECTIONS FOR USE

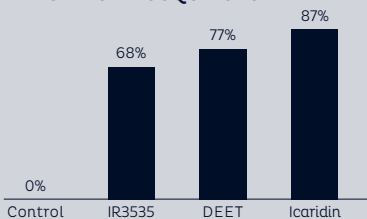

Spray on the coat or skin from 15 cm / 6 inches. Repellents work best when applied to the entire surface of your horse's coat or your skin. For the area around the eyes, a cotton cloth can be used to apply Cavalor FlyLess. Do not use on mucous membranes, wounds and sunburn. Safe for use on humans and dogs.

STORAGE

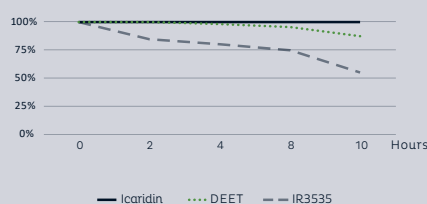

Keep product at room temperature. Between 5 °C and 25 °C. Keep out of reach of children. Keep away from ignition sources.
