SMART STARCH

About Perfomix

Cavalor Perfomix is a sports muesli for sporthorses. With puffed cereals and extrudates for easy digestion and probiotics and postbiotics to support optimal gut function, the foundation for natural resistance. With essential multivitamins that supply the higher levels needed for competition horses. B-complex vitamins play a key role in energy management

Cavalor Perfomix is a level 3 feed for horses receiving very regular and intensive training.

Wat makes Perfomix unique?

Energy from smart starch

Smart starch is more than just starch. The right combination of smart, easily digestible starch sources is an important source of energy for sport horses.

And not every source of starch is the same. Smart starch is starch derived from carefully selected grains that are made more easily digestible through flaking, puffing or extruding. Puffing and extruding bring the best out of the starch. Flaking also contributes to improved digestibility when compared to unprocessed grains. This means the horse can digest the starch more easily and use the energy more efficiently.

Smart starch supports a stable digestive balance and reduces the risk of undesirable digestion issues, like intestinal acidification, colic or laminitis. In addition, puffed and extruded ingredients taste better, are easily absorbed and create a more voluminous texture, which encourages slower eating and more chewing.

Optimal gut health

Contains pro- and postbiotics that help to bring and keep the digestive system in balance. This is especially important during training and competition periods. A balanced microbiome makes for a sport horse that feels good, performs more consistently and can get the best out of itself.

Probiotics are live, good bacteria that support gut flora. They help maintain the balance between good and bad bacteria, which is important for stable digestion and effective nutrient absorption.

Prebiotics arise when good gut bacteria convert nutrients. They support the gastrointestinal wall and immune system and contribute to a calm, resilient gut.

Sport essential multi-vitamins

The right vitamins allow a sport horse to perform optimally. In particular, vitamin E, B vitamins and vitamin C play an important role.

Vitamin E is a powerful antioxidant that protects the muscles against the damage that arises as a result of physical activity and helps with recovery. B vitamins, such as B1, B2, B6 and B12, play an important role in converting nutrients into energy and help ensure the nervous system functions well and muscles are controlled. Vitamin C is an antioxidant that not only protects the body, but also supports the immune system.

Extrudates for better digestion

By using extrusion – a state-of-the-art technology – nutrients are easier to digest and absorb.

An easily digestible feed helps a horse to get more out of every meal. The easier it is to digest, the more efficiently the horse can absorb and use energy and nutrients from the feed. During the extrusion process, the ingredients are pre-cooked to allow them to be absorbed and used more easily by the body. Extrusion increases the digestibility of the starch in the ingredients. This starch release lowers the risk of undigested starch particles entering the colon. Undigested starch in the colon acidifies it and increases the risk of health problems like colic, laminitis and muscle problems.

With their unique texture and volume, the extruded pieces stimulate chewing and ensure that horses eat more slowly. The increased chewing stimulates spit production, which contributes to the overall health of the gastrointestinal system.

Extra fibers

Horses naturally need fibre, as it is the most important source of energy but also encourages gut health. Fibre is also crucial to a horse's well-being. The increased fibre content and added long fibres are a good source of nutrients for gut flora. In addition, they ensure that the horse chews for longer and produces more spit, which has a positive effect on digestion. The extra fibre slows down absorption, prevents boredom and ensures an even wearing down of teeth.

Advice

Feed as you need

The foundation of good nutrition for your horse is adequate roughage and access to fresh drinking water. Supplement this base with concentrates or a balancer depending on the individual nutritional needs of the horse. Use supplements to fine tune.

Feeding recommendations for Cavalor Performix

We recommend a minimum of 450 g to maximum 750 g per 100 kg body weight per day. For a 600 kg horse this means a minimum of 2.7 kg and a maximum of 4.5 kg per day. Divide the concentrate feed over several portions per day, preferably after feeding roughage.

Composition

Oats / barley flakes / wheat bran / spelt hulls / Puffed maize / Puffed barley / beet molasses / broken oil seeds / soya hulls / soya (bean) meal (produced from genetically modified soya) / linseed husks / rape seed meal / sunflower seed feed / wheat middlings / wheat / maize / soya oil / linseed / yeasts / alfalfa / calcium carbonate / sodium chloride / peas / hydrated magnesium silicate

OPTRIMAL X is the guarantee that the feed is optimally tailored to the needs of that specific type of sport horse, across the 3 pillars: strong and healthy gut, tailored vitamins and minerals, smart starch.

Nutritional value	Quantity
DE (NRC)	12.72 g/kg
DE USA (NRC)	3.04 Mcal/kg
EWpa (CVB)	0.86 EWpa/kg
VREpa (CVB)	91 g/kg

Analysis	Quantity
Crude protein	12%
Crude fat	4.5%
Crude ash	6.5%
Crude fibre	9.8%
Sugars	5%
Starch	30.4%
Calcium	0.8%
Magnesium	0.3%
Phosphorus	0.5%
Sodium	0.3%

Technological additives	Quantity (addition per kg)
Ammonium propionate (1k284)	416 mg

Vitamins and trace elements	Quantity (addition per kg)
Vitamin A (3a672a)	14500 IU
Vitamin D3 (3a671)	1450 IU
Vitamin E (3a700)	350 mg
Vitamin B1 (3a821)	11.5 mg
Vitamin B2 (3a825i)	6 mg
Calcium D-pantothenate (3a841)	15 mg
Vitamin B6 (3a831)	1.35 mg
Vitamin B12 (3a836)	0.15 mg
Niacinamide (3a315)	19.5 mg
Folic acid (3a316)	2.75 mg
Biotin (3a880)	0.45 mg
Choline chloride (3a890)	360 mg
Vitamin C (3a312)	150 mg
Iron (3b103)	45 mg
Copper (3b405)	45 mg
Zinc (3b605)	126.5 mg
Manganese (3b503)	126.5 mg
Cobalt (3b304)	0.325 mg
Iodine (3b202)	1.75 mg
Selenium (3b801)	0.4 mg
Selenium (3b815)	0.6 mg

The simultaneous use of different organic acids or their salts is contraindicated where one or more of them is used at or near the maximum permitted content.
