

Natural Mud Fever Care

MUD DOC

Cavalor has reinvented its approach to treating mud fever. More than 10 essential oils work together to heal, soothe and disinfect the pastern cavities. The formula is 100 % natural and will make scratches disappear like a puff of smoke.

WHAT IS MUD FEVER?

Mud fever is, without doubt, one of the most recognisable skin problems in horses. Mud fever is a collective name for different forms of skin irritation on a horse's legs. In serious cases, the whole lower leg can swell up and, if left untreated, the swelling might not go away. In severe cases, this results in lameness.

The most well-known symptoms are redness, scales, scabs and cracks in the pastern. Bacteria and fungi can grow very quickly in the pastern and thrive here because it is warm and damp most of the time.

Mud fever can have different causes. For instance, dirt, mud, insects and washing out cracks in the skin, which are sensitive to bacterial infections, too often. Fungal infections, itch-mite and sunburn are also frequently occurring causes. Because the pastern is constantly moving it takes a long time for the skin to heal.

HEALTHY FEET, HAPPY FEET

Cavalor MudDoc acts very fast thanks to the unique combination of many essential oils such as aloe vera, lavender, eucalyptus and tea tree.

Cavalor MudDoc works on different levels to heal mud fever.

The **antiseptic properties** make the pastern cavities inhospitable for the bacteria that cause mud fever, while **wound healing** and **analgesic properties** support the welfare of the horse.

By **promoting the blood circulation**, the wounds will heal faster. Also, the **moisturising effect** of the cream will improve skin elasticity so there is less scar tissue and the coat will grow back faster. Keeping the skin elastic is important to prevent skin cracks, which appear frequently during intensive exercise such as show jumping.

NEW
FORMULA

Effective
Natural

CAVALOR MUDDOC

DESCRIPTION
White ointment

DIRECTIONS FOR USE
If necessary, shave away the hair around the mud fever. Clean the affected area with a disinfecting shampoo, for example Cavalor Derma Wash. Make sure you dry the pastern cavities with a cloth before you apply Cavalor MudDoc. Apply Cavalor MudDoc daily. We recommend using the product long enough to prevent the mud fever from coming back.

Caution: for external use only.

STORAGE
Keep out of reach of children.

Foreleg with mud fever.

The same leg after 4 days. MudDoc was applied twice a day.
