

PRODUCT DATA SHEET

STRUCOMIX SENIOR

Fiber rich feed for senior horses

- › With flaked & puffed cereals
- › Optimal gut health & immunity
- › No oats
- › Extra fibers

20 KG

SPECIAL CARE

About Strucomix Senior

Cavalor Strucomix Senior is a fibre-rich muesli for older horses. It contains long alfalfa fibres which stimulate chewing and intestinal motility. Contains pre- and probiotics for the development of a healthy intestinal flora, providing the basis for natural resistance. Oat-free formula.

With puffed cereals for good absorption and easy digestion. The higher protein content makes it easy for older horses to maintain their weight and retain their muscles.

What makes Strucomix Senior unique?

With flaked & puffed cereals

With flaked and puffed cereals for easy digestion. Flaked cereals are much easier to digest than unprocessed cereals. Puffed cereals are even easier to digest. Puffed cereals are heat-treated, disentangling up to 90% of the starch. This makes the cereals twice as digestible compared to unprocessed cereals. Puffed cereals have many other benefits compared to unprocessed cereals, such as slower release of energy, fewer sugar peaks, lower risk of digestive problems like colic or gastric ulcers, more nutrients and energy in a smaller amount of feed, more flavour, longer gastric retention, and slower release in the small intestine.

Optimal gut health & immunity

Probiotics promote good digestion. Probiotics stimulate the development of good intestinal flora. Intestinal flora plays a vital role in controlling and regulating the immune system. It protects the body against the "harmful" outside world. This is why it is vital to maintain healthy intestinal flora to ensure the best possible state of health and performance.

No oats

Oats are a cereal that can be used as an energy source in a muesli for competition horses. It quickly releases lots of energy. This is not needed for recreational horses, or for horses who do not need high energy levels.

High fiber

Adding long fibres means that the horse has to chew for longer and increases saliva production. Saliva is not the only benefit of chewing longer. It also causes natural tooth wear, alleviates boredom and ensures that the feed is consumed more slowly. Long fibres also promote intestinal motility, which improves digestion.

Advice

Feed as you need

The foundation of good nutrition for your horse is adequate roughage and access to fresh drinking water. Supplement this base with concentrates or a balancer depending on the individual nutritional needs of the horse. Use supplements to fine tune.

Feeding recommendations for Cavalor Strucomix Senior

We recommend a minimum of 450 g to maximum 750 g per 100 kg body weight per day. For a 600 kg horse this means a minimum of 2.7 kg and a maximum of 4.5 kg per day. Divide the concentrate feed over several portions per day, preferably after feeding roughage.

Composition

Wheat bran / Barley flakes / Linseed husks / Wheat middlings / Puffed maize / Spelt / Puffed wheat / Soya (bean) meal feed (produced from genetically modified soya) / Beet molasses / Linseed / Alfalfa pellet / Alfalfa stems / Carrot chunks / Toasted soya beans / Rape seed meal / Spelt hulls / Broken oil seeds / Sunflower seed meal / Calcium carbonate / Soya oil / Soya hulls / Wheat / Sodium chloride / Fructo-oligosaccharides / Vinasse / Maize gluten / Maize steep liquor / Garlic aroma

Nutritional value	Quantity
NE EWpa (CVB)	0.81 Wpa/kg
VREpa (CVB)	105 g/kg
