Soothing skin ointment

LURAX CREAM

Cavalor Lurax Cream stimulates wound healing, reduces scarring and accelerates hair regrowth – in its natural colour. Cavalor Lurax Cream also has a soothing effect, making it ideal to treat sunburn.

VERSATILE AND EFFICIENT – INSPIRED BY NATURE

Because wound healing is a natural process, Cavalor was inspired by nature for the development of Cavalor Lurax Cream. The complete formula was attained by combining complementary ingredients.

Cavalor Lurax Cream provides the necessary nutrients essential for regeneration of the skin cells. This ensures less scarring and faster hair regrowth. The cooling and soothing effect of the cream prevent irritation so that the wound can heal quickly.

On top of that, Cavalor Lurax Cream's antiseptic and anti-inflammatory properties reduce the chance of infections.

This makes Cavalor Lurax Cream the ideal Cream to treat wounds, but it can also be used to treat an itch, skin irritation or pain from sunburn.

SCIENTIFICALLY PROVEN

Cavalor Lurax Cream was used in a Canadian study to verify its efficacy in wound healing. During this study, 8 cases were treated after injury over 10 days, either with Cavalor Lurax Cream, a positive control that will certainly heal wounds, or a negative control that has no effect whatsoever.

The study concluded that healing when using Cavalor Lurax Cream was slightly slower the first few days when compared to the medicine used in the study. However, starting from day 7 there was a significant difference: Cavalor Lurax Cream better closes the wound, ensuring less scarring and a better overall healing process.
