# About Start & Go Soft

**Cavalor Start & Go Soft is an extrudate for newly-weaned foals. The nutritious, tasty and easily digestible extrudates are perfect for teaching foals to eat concentrated feeds and prevent growth stops.**

The extrudates are easy to absorb, easy to digest and tasty, facilitating a smooth transition after lactation. The right calcium/phosphorus/magnesium ratio ensures good bone development and density. The ideal combination of organic copper, zinc and manganese ensures good development of bones, joints and tendons.

## What makes Start & Go Soft unique?

### Start to eat

The soft chunks are nutritious, tasty and easily digestible. They are ideal for teaching foals to eat concentrated feeds, ensuring a smooth transition after lactation.

### Steady Growth

It is vital to focus on gradual growth during the development from foetus into a young horse. Uneven growth spurts (whether too slow or too fast) pose the largest risk factors in terms of development problems and orthopaedic disorders. The right ratio and combination of nutrients, both as building blocks and energy providers which are also easily digestible, form the basis for gradual growth.

### Breeding essential multi-minerals

The right calcium/phosphorus/magnesium ratio ensures good bone development and density. The ideal combination of organic copper, zinc and manganese ensures good development of bones, joints and tendons.

## Advice

### Feed as you need

The foundation of good nutrition for your horse is adequate roughage and access to fresh drinking water. Supplement this base with concentrates or a balancer depending on the individual nutritional needs of the horse. Use supplements to fine tune.

### Feeding recommendations for Cavalor Start & Go Soft

We recommend a minimum of 250 g to maximum 450 g per 100 kg body weight per day. For a 600 kg horse this means a minimum of 1.5 kg and a maximum of 2.7 kg per day. Divide the concentrate feed over several portions per day, preferably after feeding roughage.

### TIP

Not all feed scoops are the same size. Weigh the contents of your feed scoop so that you know exactly how much your horse is getting.

## Composition

Wheat middlings / Wheat / Broken maize / Soya meal / Glycerol / Sunflower seed feed / Whey powder / Skimmed milk powder (4%) / Carob pods / Linseed / Coconut fat / Toasted soya beans / Calcium carbonate / Brewer's yeast / Fructo-oligosaccharides / Sodium chloride

Nutritional value	Quantity
NE EWpa (CVB)	0.86 EWpa/kg
VREpa (CVB)	136 g/kg
DE (NRC)	12.43 MJ/kg
DE USA (NRC)	3.44 Mcal/kg

Analysis	Quantity	Vitamins and trace elements	Quantity (addition per kg)
Crude protein	12.5%	Vitamin A (3a672a)	18 125 IU
Crude fat	7.5%	Vitamin D3 (3a671)	1875 IU
Crude ash	7%	Vitamin E (3a700)	350 mg
Crude fibre	11%	Vitamin B1 (3a821)	13.625 mg
Sugars	4.5%	Biotin (3a880)	0.253 mg
Starch	26.5%	Choline chloride (3a890)	313.8 mg
Calcium	0.8%	Iron (3b103)	70 mg
Magnesium	0.3%	Iodine (3b202)	1.35 mg
Phosphorus	0.6%	Cobalt (3b304)	0.35 mg
Sodium	0.4%	Copper (3b405)	55 mg
		Manganese (3b503)	162.5 mg
		Manganese (3b506)	15 mg
		Zinc (3b605)	143.25 mg
		Selenium (3b801)	0.438 mg

Technological additives	Quantity (addition per kg)
Propylgallaat (E310)	2 mg
Ammonium propionate (1k284)	1920 mg
